“What would it mean to your business if your maintenance related downtime was halved and the productivity of your maintenance staff increased by 20%?”

CWORKS MWorks: “Keeping field workers on the field”

Introducing CWorks “MWorks”, mobility solution for those who require anytime and anywhere access to maintenance management through mobile.

MWorks offers faster browsing as you navigate and update work orders through a simple mobile web form, is the handheld version of CWorks CMMS designed especially for those who are constantly on the move.

By leveraging on a web based architecture and an always connected design, mobile users are able to enjoy better web experience either connected to a LAN/WAN network using WiFi/Bluetooth or devices which are 3G/EDGE/GPRS access. This accessibility delivers easier navigation for any organizations with geographically diversified employees.

This new innovation will be able to deliver a richer mobile experience for CWorks CMMS users.

Please use this link on your mobile browser to view the demo.

IMPLEMENTATION REQUIRES A CHAMPION

Implementation of a CMMS is about managing people. Getting people to look up asset serial numbers or asking them to do paperwork is never easy. Especially if the data collected is for management reports where the people recording this data will probably not use the data themselves as the reports go to management. On top of this, a CMMS may initially be viewed as a work control mechanism rather than a continuous improvement tool.

With so much work involved and so little reward viewed. Implementing a CMMS is never easy unless the maintenance department is very small, thus less workforce.

In order for implementation to be successful, the implementors have to be very good change agents. They must champion the product by communicating well the rewards of the product. Also it doesn't hurt them to have the authority to enact the change. The implementors need not only be the champions of the product by being enthusiastic about it but must also be able to provide directions. Dedicated CMMS champions with enough authority usually ensures CMMS implementation success.
